This changes everything

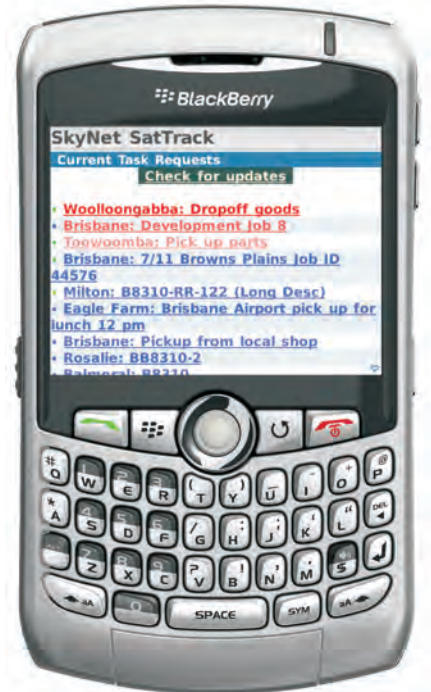

Highly advanced yet easy to use

satTrack Job Dispatch

A key feature of the **satTrack** system is the Job dispatch facility. This is a fully integrated Job prioritisation and dispatch tool whereby jobs are updated and dispatched in real time based upon the actual location of the work force. In addition it provides detailed and accurate order information to your field workers so they can prioritise their service calls. The result is noticeable gains in efficiency and responsiveness together with a reporting tool that can demonstrate time spent at each job and actual hours worked.

- FIS Operator Is Logged Into Job Dispatch And Views The Real Time Position Of Field Staff.
- When A Job Is Received, The Job Details Are Populated Into FIS.
- FIS Will Locate The Nearest 5 Workers And Can Either Automatically Assign It To The Nearest Worker or If Preferred, Can Be Assigned Manually.
- The Job Is Then Sent To An Applicable Field Worker's Mobile Device.
- The Field Worker Views Job, Accepts And Starts Job.
- GPS Position Stamp Provides Record Of Actual Arrival And Departure At Site.
- Opportunity For Job / Time Audit.
- Field Workers Have The Opportunity To View And Update The Job Pipeline At Any Time.

satTrack Mobile Duress & Alert

Early Intervention is generally the key to defusing hostile or dangerous situations. **satTrack** offers an early alerting tool to discreetly request assistance to what may become otherwise a threatening or potentially dangerous situation.

With more people working remotely and leading busy lives it is simple to miss the warning signs but not too late to send a duress if trouble meets you just around the corner. Early intervention may be your key to personal safety.

satTrack Fleet Information System

- View Exact Location Of All Staff And Alarm Activations Via Secure Web Interface In Real-time.
- Mobile Handsets And PDA's With Integrated Duress Alarms And Location System.
- Coverage Options For Metropolitan And Remote Areas.
- Out Of Coverage Data Logging And Automatic Trip Replay.
- Optional 24 / 7 Duress Monitoring And Response Service By A Security Monitoring Centre.
